

DEVELOPER SCOPE OF WORK & TECHNICAL SPECIFICATION

Online Personal Styling & Wardrobe Platform — Rapid Web MVP Build

Target Timeline: 6 Working Days (Rapid MVP Sprint) | Stack: Next.js + PHP (Hostinger) + MySQL | Authored By: Tejas Gandhi (Mastertej)

1. Project Overview & Core Objective

Build a lean, high-conversion, mobile-responsive web platform that connects customers with fashion stylists across tiered budgets. The web application must be fully functional, deployed on Hostinger, and ready for launch within a 6-day rapid development sprint. Keep architectural complexity low: avoid over-engineering, WebSockets, or heavy background workers. Rely on clean REST endpoints and direct WhatsApp redirection for styling consultations.

2. Technology Stack & Hosting Constraints

Component	Technology / Tool	Implementation Specification & Hostinger Details
Frontend	Next.js / React + Tailwind CSS	Mobile-first responsive UI. Fast initial page load (<2s). Static export or lightweight Node/SSR deployment, optimized for mobile browsers.
Backend API	PHP 8.x (RESTful API)	Clean structured JSON endpoints ('/api/*.php'). Uses PDO for MySQL access with prepared statements. CORS headers configured for Next.js domain.
Database	MySQL 8.x (Hostinger)	Relational schema for Services, Stylists, Bookings, and Admin Auth. Standard UTF8mb4 character set.
Payment Gateway	Razorpay (or Cashfree)	Standard checkout modal (UPI, GPay, Cards, Netbanking). Server-side webhook/callback signature verification before confirming booking.
Stylist Consultation	WhatsApp Click-to-Chat API	Zero-friction lookup: after payment confirmation, the customer is directed to WhatsApp with a pre-filled booking message to the stylist/concierge.

3. Core Services Required (Must Include All 6 in Catalog)

Service Name	Description & Customer Deliverable	Base Duration / Model
1. Personal Styling	Occasion curation (weddings, parties, dates, casual). Outfit guide & personalized look recommendations.	Per Session (1-2 Looks)
2. Wardrobe Styling	Audit existing wardrobe, formulate new combinations, identify missing staple pieces.	Per Session (60-90 mins)
3. Travel Wardrobe Planning	Destination-specific capsule packing plan, climate-appropriate sets, luggage optimization.	Per Trip (3-7 Days)
4. Image Consulting	Executive presence, corporate dress code guidelines, color analysis, and personal branding.	Comprehensive Session
5. Personal Shopper / Luxury	Direct e-commerce shopping links, boutique store curation, luxury designer purchasing guidance.	Per Shopping Request
6. Closet Organization	Virtual decluttering steps, categorization strategy, and seasonal layout maintenance guide.	Per Closet Audit

4. Stylist Budget Tiering Architecture

Customers must be able to filter stylists on the frontend based on their income/budget category:

- Tier 1 (Budget / Starter): Junior stylists, fresh fashion graduates, pocket-friendly sessions (e.g., ₹999 – ₹1,999).
- Tier 2 (Mid-Range / Professional): Certified stylists, 3+ years experience, event & corporate styling (e.g., ₹2,500 – ₹4,999).
- Tier 3 (Premium / Celebrity / Influencer): Top-tier stylists & featured fashion influencers with established portfolios (e.g., ₹6,000+).

5. Database Schema Specification (MySQL / Hostinger)

Developer to create the following database tables using PDO prepared statements:

Table Name	Columns, Types & Constraints	Description & Indexes
`services`	`id` (INT PK AI), `title` (VARCHAR 100), `slug` (VARCHAR 100 UNIQUE), `short_desc` (VARCHAR 255), `full_desc` (TEXT), `base_price` (DECIMAL 10,2), `icon_url` (VARCHAR 255), `is_active` (TINYINT 1)	Stores the 6 primary styling offerings and pricing defaults.
`stylists`	`id` (INT PK AI), `name` (VARCHAR 100), `photo_url` (VARCHAR 255), `bio` (TEXT), `specialties` (VARCHAR 255), `tier` (ENUM 'budget', 'mid_range', 'premium', 'influencer'), `rate` (DECIMAL 10,2), `whatsapp_num` (VARCHAR 20), `rating` (DECIMAL 2,1), `is_active` (TINYINT 1)	Index on `tier`, `is_active`. Stores stylist profiles and direct WhatsApp dispatch number.
`bookings`	`id` (INT PK AI), `booking_ref` (VARCHAR 20 UNIQUE), `customer_name` (VARCHAR 100), `customer_email` (VARCHAR 120), `customer_phone` (VARCHAR 20), `service_id` (INT FK), `stylist_id` (INT FK), `preferred_date` (DATE), `time_slot` (VARCHAR 50), `style_notes` (TEXT), `amount` (DECIMAL 10,2), `payment_status` (ENUM 'pending', 'paid', 'failed'), `gateway_order_id` (VARCHAR 100), `gateway_payment_id` (VARCHAR 100), `booking_status` (ENUM 'new', 'confirmed', 'completed', 'cancelled'), `created_at` (DATETIME)	Index on `booking_ref`, `payment_status`. Central transaction and intake records.
`admins`	`id` (INT PK AI), `username` (VARCHAR 50 UNIQUE), `password_hash` (VARCHAR 255), `created_at` (DATETIME)	Stores business owner admin login. Passwords hashed via `password_hash(..., PASSWORD_BCRYPT)`.

6. Backend PHP REST Endpoints Specification

All APIs reside in `/api/` directory on Hostinger and respond with JSON `{success: bool, data: [...], error: string}`:

Endpoint	Method	Payload / Query Params	Functionality
`/api/services.php`	GET	None	Returns list of active styling services.
`/api/stylists.php`	GET	`?tier=budget mid_range premium influencer`	Returns filtered list of stylists with photos and bios.
`/api/create-order.php`	POST	`{service_id, stylist_id, customer_name, phone, email, date, time_slot, style_notes}`	Validates intake, creates temporary booking row, and calls Razorpay API to generate `order_id`.
`/api/verify-payment.php`	POST	`{razorpay_order_id, razorpay_payment_id, razorpay_signature}`	Validates cryptographic HMAC signature, marks booking as `paid`, triggers confirmation, and returns formatted WhatsApp redirect URL.
`/api/admin/login.php`	POST	`{username, password}`	Validates admin credentials, issues secure session/JWT token.
`/api/admin/bookings.php`	GET/PUT	`GET` list `PUT {booking_id, status}`	Admin view of all bookings; update status (Confirmed / Completed).
`/api/admin/stylists.php`	POST/PUT	Stylist object (name, photo, tier, rate, whatsapp)	Admin CRUD to add or edit stylist profiles & rates.

7. WhatsApp Integration Specification (Zero Friction)

Upon successful payment verification in `/api/verify-payment.php`, frontend immediately renders confirmation and generates a direct link:
https://wa.me/<STYLIST_OR_CONCIERGE_NUMBER>?text=Hi%2C%20I%20have%20booked%20a%20Personal%20Styling%20session%20(Ref%3A%20<REF>).%20Here%20are%20my%20style%20preferences...
Clicking this button automatically opens WhatsApp (app or web) with stylist contact and booking context preloaded.

8. Next.js Frontend Pages & User Flows

Screen / Page	Core Elements & UI Components
1. Homepage ('/')	- Hero Section: Value proposition, headline ('Look Your Best, Every Day'), primary 'Book a Stylist' CTA. 6 Core Services Grid: Cards with icons, concise benefits, and 'Select Service' trigger. - How It Works (3 Steps): 1. Pick your Budget & Stylist → 2. Book & Share Needs → 3. Get Styled via WhatsApp. - Featured Stylists Carousel / Preview with budget badges. - Trust Badges & FAQ Accordion.
2. Stylist Directory ('/stylists')	- Budget Tier Filter Tabs: [All] [Budget / Starter] [Mid-Range] [Luxury & Influencer]. - Stylist Cards: Photo, Name, Specialties tags, Fee per session, Star rating, 'View Profile / Book' button.
3. Booking & Style Quiz ('/book')	- Step 1: Confirm Service & Stylist selection. - Step 2: Date & preferred time window picker (Morning / Afternoon / Evening). - Step 3: Customer Intake (Full Name, WhatsApp Mobile, Email, Style Goals / Occasion notes). - Step 4: Price summary & 'Proceed to Pay' button launching Razorpay checkout modal.
4. Booking Confirmation ('/confirmed')	- Green checkmark, Booking Reference ID (e.g. 'STYL-8492'), Date & Stylist details. - Prominent green button: 'Connect on WhatsApp Now' (auto-opens pre-filled chat). - Instructions on what to prepare (e.g., wardrobe photos, occasion details).
5. Business Admin ('/admin')	- Clean authentication gate (Username & Password). - Bookings Table: Filter by status (Paid / Confirmed / Completed), view customer intake notes, phone, stylist. - Stylist Manager: Add new stylist, upload photo, edit budget tier, toggle active status.

9. 6-Day Rapid Development Sprint & Milestones

Sprint Day	Developer Deliverables & Action Items	Review Gate
Day 1	- Initialize Next.js project with Tailwind CSS. - Execute MySQL table schema migration script on Hostinger ('services', 'stylists', 'bookings', 'admins'). - Create PDO database connection helper ('db.php') and test endpoint.	DB & repo initialized
Day 2	- Build Homepage with 6 core styling services catalog & 'How It Works' workflow. - Build Stylist Directory with budget tier tabs (Starter / Mid-Range / Luxury / Influencer). - Implement 'GET /api/services.php' and 'GET /api/stylists.php'.	Catalog & directory functional
Day 3	- Build interactive multi-step booking modal and customer intake questionnaire. - Implement service selection, stylist assignment, date/time slot picker, and intake validation. - Build customer summary screen before payment trigger.	Booking UI & intake complete
Day 4	- Integrate Razorpay SDK on frontend & implement backend order creation ('create-order.php'). - Implement signature verification ('verify-payment.php') and save confirmed booking to DB. - Setup WhatsApp click-to-chat redirect on booking confirmation screen.	End-to-end payment & WhatsApp verified
Day 5	- Build Business Admin Panel ('/admin'): Secure login, bookings list, status toggle (Confirmed / Completed). - Implement Stylist Manager: Add/edit stylist profiles, photos, rates, and budget tiers. - Mobile browser responsiveness audit (iOS Safari, Android Chrome).	Admin panel functional & mobile QA
Day 6	- Production build & deployment on Hostinger shared cloud hosting. - Domain mapping, SSL security activation, and live transaction sanity test. - Public Launch, Code Repository & Database Export Handover.	Public Go-Live & Handover

10. Definition of Done & Acceptance Criteria

- Mobile-First Responsiveness: The site must look and feel like an app on iPhone and Android mobile browsers.
- All 6 Services Displayed: Personal Styling, Wardrobe, Travel, Image Consulting, Personal Shopper, Closet Organization.
- Working Razorpay Flow: Creates order, opens checkout, verifies signature, marks booking paid, and records transaction in MySQL.
- WhatsApp Redirection: Direct link opens WhatsApp with client's style needs and booking reference pre-filled.
- Password Security: Admin passwords properly hashed with BCrypt; all database queries use prepared statements (no raw SQL concatenation).
- Deployment on Hostinger: Live website accessible on client domain with HTTPS SSL active.
